Chemistry and Physics of Lipids, 65 (1993) 239–241
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 65 (1993)

acidic phospholipid, membrane fusion, hydrophobicity, fusogenic ion, 193
aggregation, pyrene, sphingolipids, coated vesicles, lateral diffusion, 43
air-water interface, monolayers, phospholipids, fatty acids, phase separation, fluorescence microscopy, 31
anaesthetics, lipid bilayer, main transition, heterogeneity, cholesterol, 205
antioxidants, ESR, vitamine E, vitamin C, kinetics, free radicals, 103
antioxidants, phenylpropanoid glycosides, linoleic acid, autoxidation, micelle, 151
antioxidation, autoxidation, fatty acids, electron spin resonance, radicals, frozen systems, 113
autoxidation, antioxidation, fatty acids, electron spin resonance, radicals, frozen systems, 113
autoxidation, phenylpropanoid glycosides, antioxidants, linoleic acid, micelle, 151

benzoylation, mycolic acid, mass spectrometry, chromatography, 93
bilayer thickness, lipid, multilamellar dispersion, phase diagram, 141
bimodal distributions, extrusion, quasi-elastic light scattering, vesicles, 1
branched-chain acids, ^{13}C NMR spectra, methyl-branched acids, wool grease fatty acids, isostearic acid, 155

chiral shift regent, ether lipids synthesis, regioselective reductive cleavage of acetals, 2,5-di-*O*-methyl-1,3(R);4,6(R)-bis-*O*-(4-methoxybenzylidene)-D-mannitol, enantiomers of 1(3)-*O*-alkyl-2-*O*-methyl-*sn*-glycero-phosphocholines, 65
cholesterol, lipid bilayer, main transition, heterogeneity, anaesthetics, 205
chromatography, mycolic acid, benzoylation, mass spectrometry, 93
cis,trans conjugated dienes, lipid peroxidation, *trans,trans* conjugated dienes, free malondialdehyde, HPLC-UV, second derivative spectroscopy, rat hepatocyte cultures, 133
coated vesicles, pyrene, sphingolipids, lateral diffusion, aggregation, 43
conformational effects, phosphatidylcholines, polar region, FTIR spectroscopy, metal salt complexes, 121
curvature, vesicle, extrusion, ethanol, interdigitation, dipalmitoylphosphatidylcholine, pyrene-labeled phosphatidylcholine, 11

derivatization, fatty alcohol, diacylglycerol, microwave, 217
diacetylenic phospholipids, tubules, freeze fracture, electron microscopy, X-ray scattering, phase transitions, 179
diacylglycerol, fatty alcohol, derivatization, microwave, 217
dipalmitoylphosphatidylcholine, vesicle, extrusion, ethanol, interdigitation, curvature, pyrene-labeled phosphatidylcholine, 11
dipole moment of sphingolipids, sphingolipids, gangliosides, sphingosine, sphingolipid monolayers, molecular area of sphingolipids, 225
DPH, *N*-acylethanolamines, DPPC liposomes, TMA-DPH, fluorescence anisotropy, 165
DPPC liposomes, *N*-acylethanolamines, DPH, TMA-DPH, fluorescence anisotropy, 165

electron microscopy, tubules, diacetylenic phospholipids, freeze fracture, X-ray scattering, phase transitions, 179
electron spin resonance, autoxidation, antioxidation, fatty acids, radicals, frozen systems, 113
enantiomers of 1(3)-*O*-alkyl-2-*O*-methyl-*sn*-glycero-phosphocholines, ether lipids synthesis, regioselective reductive cleavage of acetals, 2,5-di-*O*-methyl-1,3(R);4,6(R)-bis-*O*-(4-methoxybenzylidene)-D-mannitol, chiral shift regent, 65
ESR, vitamine E, vitamin C, kinetics, free radicals, antioxidants, 103
ethanol, vesicle, extrusion, interdigitation, dipalmitoylphosphatidylcholine, curvature, pyrene-labeled phosphatidylcholine, 11
ether lipids synthesis, regioselective reductive cleavage of acetals, 2,5-di-*O*-methyl-1,3(R);4,6(R)-bis-*O*-(4-methoxybenzylidene)-D-mannitol, enantiomers of 1(3)-*O*-alkyl-2-*O*-methyl-*sn*-glycero-phosphocholines, chiral shift regent, 65
extrusion, bimodal distributions, quasi-elastic light scattering, vesicles, 1
extrusion, vesicle, ethanol, interdigitation, dipalmitoylphosphatidylcholine, curvature, pyrene-labeled phosphatidylcholine, 11

fast membrane kinetics, ultrasonic spectroscopy, phospholipid bilayer, hydrocarbon chain motion, rotational isomerism, 85
fatty acids, autoxidation, antioxidation, electron spin resonance, radicals, frozen systems, 113
fatty acids, monolayers, phospholipids, phase separation, air-water interface, fluorescence microscopy, 31
fatty alcohol, diacylglycerol, derivatization, microwave, 217
fluorescence anisotropy, *N*-acylethanolamines, DPPC liposomes, DPH, TMA-DPH, 165

fluorescence microscopy, monolayers, phospholipids, fatty acids, phase separation, air-water interface, 31
fluorescence, membrane permeability, phase transition, lipid bilayer, 23
free malondialdehyde, lipid peroxidation, *cis,trans* conjugated dienes, *trans,trans* conjugated dienes, HPLC-UV, second derivative spectroscopy, rat hepatocyte cultures, 133
free radicals, ESR, vitamine E, vitamin C, kinetics, antioxidants, 103
freeze fracture, tubules, diacetylenic phospholipids, electron microscopy, X-ray scattering, phase transitions, 179
frozen systems, autoxidation, antioxidation, fatty acids, electron spin resonance, radicals, 113
FTIR spectroscopy, phosphatidylcholines, polar region, metal salt complexes, conformational effects, 121
fusogenic ion, membrane fusion, acidic phospholipid, hydrophobicity, 193

gangliosides, sphingolipids, sphingosine, sphingolipid monolayers, dipole moment of sphingolipids, molecular area of sphingolipids, 225
glycolipid, trehalose mycolate, *Nocardia*, toxicity, mycolic acid, 171

heterogeneity, lipid bilayer, main transition, anaesthetics, cholesterol, 205
HPLC-UV, lipid peroxidation, *cis,trans* conjugated dienes, *trans,trans* conjugated dienes, free malondialdehyde, second derivative spectroscopy, rat hepatocyte cultures, 133
hydrocarbon chain motion, ultrasonic spectroscopy, phospholipid bilayer, fast membrane kinetics, rotational isomerism, 85
hydrophobicity, membrane fusion, acidic phospholipid, fusogenic ion, 193

interdigitation, vesicle, extrusion, ethanol, dipalmitoylphosphatidylcholine, curvature, pyrene-labeled phosphatidylcholine, 11
isostearic acid, ^{13}C NMR spectra, branched-chain acids, methyl-branched acids, wool grease fatty acids, 155

kinetics, ESR, vitamine E, vitamin C, free radicals, antioxidants, 103

lateral diffusion, pyrene, sphingolipids, coated vesicles, aggregation, 43
light scattering, phospholipid tubule, polymerizable lipid, phosphatidycholine, precipitation, 77
linoleic acid, phenylpropanoid glycosides, antioxidants, autoxidation, micelle, 151
lipid bilayer, main transition, heterogeneity, anaesthetics, cholesterol, 205
lipid bilayer, membrane permeability, phase transition, fluorescence, 23
lipid peroxidation, *cis,trans* conjugated dienes, *trans,trans* conjugated dienes, free malondialdehyde, HPLC-UV, second derivative spectroscopy, rat hepatocyte cultures, 133
lipid, multilamellar dispersion, bilayer thickness, phase diagram, 141

2,5-di-*O*-methyl-1,3(R);4,6(R)-bis-*O*-(4-methoxybenzylidene)-D-mannitol, ether lipids synthesis, regioselective reductive cleavage of acetals, enantiomers of 1(3)-*O*-alkyl-2-*O*-methyl-*sn*-glycero-phosphocholines, chiral shift regent, 65
main transition, lipid bilayer, heterogeneity, anaesthetics, cholesterol, 205
mass spectrometry, mycolic acid, benzoylation, chromatography, 93
membrane fusion, acidic phospholipid, hydrophobicity, fusogenic ion, 193
membrane permeability, phase transition, fluorescence, lipid bilayer, 23
metal salt complexes, phosphatidylcholines, polar region, FTIR spectroscopy, conformational effects, 121
methyl-branched acids, ^{13}C NMR spectra, branched-chain acids, wool grease fatty acids, isostearic acid, 155
micelle, phenylpropanoid glycosides, antioxidants, linoleic acid, autoxidation, 151
microwave, fatty alcohol, diacylglycerol, derivatization, 217
molecular area of sphingolipids, sphingolipids, gangliosides, sphingosine, sphingolipid monolayers, dipole moment of sphingolipids, 225
monolayers, phospholipids, fatty acids, phase separation, air-water interface, fluorescence microscopy, 31
multilamellar dispersion, lipid, bilayer thickness, phase diagram, 141
mycolic acid, benzoylation, mass spectrometry, chromatography, 93
mycolic acid, trehalose mycolate, *Nocardia*, toxicity, glycolipid, 171

N-acylethanolamines, DPPC liposomes, DPH, TMA-DPH, fluorescence anisotropy, 165
^{13}C NMR spectra, branched-chain acids, methyl-branched acids, wool grease fatty acids, isostearic acid, 155
Nocardia, trehalose mycolate, toxicity, glycolipid, mycolic acid, 171

phase diagram, lipid, multilamellar dispersion, bilayer thickness, 141
phase separation, monolayers, phospholipids, fatty acids, air-water interface, fluorescence microscopy, 31
phase transition, membrane permeability, fluorescence, lipid bilayer, 23
phase transitions, tubules, diacetylenic phospholipids, freeze fracture, electron microscopy, X-ray scattering, 179
phenylpropanoid glycosides, antioxidants, linoleic acid, autoxidation, micelle, 151
phosphatidycholine, phospholipid tubule, polymerizable lipid, light scattering, precipitation, 77
phosphatidylcholines, polar region, FTIR spectroscopy, metal salt complexes, conformational effects, 121
phospholipid bilayer, ultrasonic spectroscopy, hydrocarbon chain motion, fast membrane kinetics, rotational isomerism, 85

phospholipid tubule, polymerizable lipid, light scattering, phosphatidycholine, precipitation, 77
phospholipids, monolayers, fatty acids, phase separation, air-water interface, fluorescence microscopy, 31
polar region, phosphatidylcholines, FTIR spectroscopy, metal salt complexes, conformational effects, 121
polymerizable lipid, phospholipid tubule, light scattering, phosphatidycholine, precipitation, 77
precipitation, phospholipid tubule, polymerizable lipid, light scattering, phosphatidycholine, 77
pyrene, sphingolipids, coated vesicles, lateral diffusion, aggregation, 43
pyrene-labeled phosphatidylcholine, vesicle, extrusion, ethanol, interdigitation, dipalmitoylphosphatidylcholine, curvature, 11

quasi-elastic light scattering, bimodal distributions, extrusion, vesicles, 1

radicals, autoxidation, antioxidation, fatty acids, electron spin resonance, frozen systems, 113
rat hepatocyte cultures, lipid peroxidation, *cis,trans* conjugated dienes, *trans,trans* conjugated dienes, free malondialdehyde, HPLC-UV, second derivative spectroscopy, 133
receptor, thromboxane, 57
regioselective reductive cleavage of acetals, ether lipids synthesis, 2,5-di-*O*-methyl-1,3(R);4,6(R)-bis-*O*-(4-methoxybenzylidene)-D-mannitol, enantiomers of 1(3)-*O*-alkyl-2-*O*-methyl-*sn*-glycero-phosphocholines, chiral shift regent, 65
rotational isomerism, ultrasonic spectroscopy, phospholipid bilayer, hydrocarbon chain motion, fast membrane kinetics, 85

second derivative spectroscopy, lipid peroxidation, *cis,trans* conjugated dienes, *trans,trans* conjugated dienes, free malondialdehyde, HPLC-UV, rat hepatocyte cultures, 133
sphingolipid monolayers, sphingolipids, gangliosides, sphingosine, dipole moment of sphingolipids, molecular area of sphingolipids, 225
sphingolipids, gangliosides, sphingosine, sphingolipid monolayers, dipole moment of sphingolipids, molecular area of sphingolipids, 225
sphingolipids, pyrene, coated vesicles, lateral diffusion, aggregation, 43
sphingosine, sphingolipids, gangliosides, sphingolipid monolayers, dipole moment of sphingolipids, molecular area of sphingolipids, 225

thromboxane, receptor, 57
TMA-DPH, *N*-acylethanolamines, DPPC liposomes, DPH, fluorescence anisotropy, 165
toxicity, trehalose mycolate,*Nocardia*, glycolipid, mycolic acid, 171
trans,trans conjugated dienes, lipid peroxidation, *cis,trans* conjugated dienes, free malondialdehyde, HPLC-UV, second derivative spectroscopy, rat hepatocyte cultures, 133
trehalose mycolate,*Nocardia*, toxicity, glycolipid, mycolic acid, 171
tubules, diacetylenic phospholipids, freeze fracture, electron microscopy, X-ray scattering, phase transitions, 179

ultrasonic spectroscopy, phospholipid bilayer, hydrocarbon chain motion, fast membrane kinetics, rotational isomerism, 85

vesicle, extrusion, ethanol, interdigitation, dipalmitoylphosphatidylcholine, curvature, pyrene-labeled phosphatidylcholine, 11
vesicles, bimodal distributions, extrusion, quasi-elastic light scattering, 1
vitamin C, ESR, vitamine E, kinetics, free radicals, antioxidants, 103
vitamine E, ESR, vitamin C, kinetics, free radicals, antioxidants, 103

wool grease fatty acids, ^{13}C NMR spectra, branched-chain acids, methyl-branched acids, isostearic acid, 155

X-ray scattering, tubules, diacetylenic phospholipids, freeze fracture, electron microscopy, phase transitions, 179
